

RESOURCE SERIES 02

Idea Ignition Kit

Spark a thought. Shape a start.

Explore widely. Choose deliberately. Start with purpose.

A practical creative course for writers, makers, organizers, and independent businesses. Thirty guided prompt labs, a complete pitch playbook, and a seven-day practice help you turn a promising thought into a clear concept and a useful experiment.

Expanded edition v2.0. Original examples and a fillable workbook bring the method into your own project.

START HERE

Give the idea an honest start

A course you can use with a notebook, a team, or an AI assistant.

Your route through the kit

Pages 3-7 teach the five-step path: notice, widen, question, shape, and start. Pages 8-37 expand all thirty original prompts into guided labs. Pages 38-42 develop your pitch and offer. Pages 43-44 provide a seven-day practice; pages 45-47 show complete worked cases. Use the fillable workbook on pages 48-50 and the sources on page 51.

Choose one project to carry through

Pick a modest idea that matters to you: a writing exercise, a better meeting tool, a useful digital resource, or an improvement to a routine. Keep the same project through the method before switching topics. Comparing your first description with your later concept makes the learning visible.

Use AI as a collaborator

You can complete every exercise yourself. If using AI, add your audience, situation, constraints, and known facts to the reusable prompt. Ask it to identify assumptions. Use approved tools and avoid uploading confidential notes or personal information without authorization. Generated options and simulated reactions are material to examine, not proof of customer demand.

Build a record you can trust

The scenarios and sample results in this kit are fictional teaching examples. They are not testimonials or measured product outcomes. Save the directions you reject and record why. Progress means making a clearer decision, including changing or pausing an idea when the evidence calls for it.

THE FIVE-STEP IDEA PATH

Notice the moment worth changing

A useful idea begins with attention.

Build the habit

Start with a scene, not a slogan. "People need inspiration" is too broad to investigate. "A new team member has three links and cannot tell which instruction is current" gives you a person, a task, and a point of friction. Record what happened, what the person tried, and what stopped them. Keep your interpretation beside the observation instead of mixing them together.

An observation can come from your own work, a voluntary conversation, or a process you have permission to watch. Ask about the last actual occasion. What triggered the task? What happened next? Which workaround helped? A story about yesterday usually gives you more usable detail than a prediction about an imaginary future product.

Keep the spark honest

Fictional observation: a club organizer sent the same location directions to four people before one event. Interpretation: the invitation may be hard to navigate. Possible response: a clearer event card. The observation supports investigation; it does not establish that anyone wants another app.

Turn attention into a brief

Write one sentence that names the person, situation, and desired improvement. Then record the evidence you have and the question you still need answered. Collect alternatives before committing to a solution. A better invitation, a confirmation message, and a map link may address the same friction at very different costs. Choose a problem small enough to examine this week and meaningful enough that solving it would matter.
